A Wonderful Resource For Maritime History Buffs

By Robert R. Little

I first read "The Story of Sail" in 2000, not long after it was initially published, and was dazzled by the sheer number of drawings it contained. The book is hefty, over three hundred and fifty pages, and hundreds of types illustrated, from the earliest examples of humans learning to harness wind and waves, to experimental sailing craft of the late twentieth century.

As a reference book for the history buff, the book succeeds. As a resource for the student of maritime history, it provides the sources for the drawings, though in some instances a few mistakes were made. One which stood out to me was on page 56, "Nina in 1492 (i)". The authors list the source as Bjorn Landstrom's "Das Schiff" (The Ship); in this case the source should be the same as the Pinta, and even then this points to the book that the drawings were gleaned from (Heinrich Winter's "Die Kolumbuschiffe von 1492"). Which brings me to another minor problem I have with the book; many of these drawings are based upon work found in other books. That in itself is not so troublesome. However, in most cases within this book, the reference tends to stop there. In the case of the aforementioned Nina, the actual source is E.A. D'Albertis' work in 1892.

So the occasional source chase ensues.

Regardless, the book is still a wonderful reference to have. Recommended.
